

## DRAINAGE PRODUCTS FOR PLEURAL EFFUSIONS AND ASCITES

### PLEURX CATHETER

The PleurX catheter is an indwelling catheter designed for long-term and recurrent drainage of malignant pleural effusions and recurrent ascites. When used for pleural effusions it can be used both for drainage and instilling Bleomycin or talc. Once inserted the patients, or their carers, can drain as often as needed in the comfort of their own home

- **PLEURX CATHETER KIT ( 50-7050)** includes a 15,5F fenestrated silicone catheter with a 2-way valve and a polyester cuff; a 16F peel-away introducer; J-tip guide wire; tunneler; drainage line; valve cap; 12ml syringe; Needle; 5-in-1 adapter; foam pad and gauze (Nappi: 413800\*001)
